

IN THE CLAIMS:

Please amend the claim as follows:

1-13. (cancelled).

14. (Currently Amended) An air venting apparatus for a milk bottle having a soft teat for a baby to suck, a bottle for containing milk, and a fixing frame for fixing the soft teat to the bottle without leakage, the apparatus comprising:

an air vent valve extending downward from a predetermined position of the bottom of the teat and having a first extending hole for communicating external air with the inside of the bottle, a second extending hole coupled to ~~under~~ the first hole, for receiving the air from the first hole, and a valve that ~~convexes~~ downward and surrounds ~~under~~ the second extending hole; and

an annular connection member extending downward from the air vent valve to the vicinity of the bottom of the bottle, for providing ~~the~~ controlled air toward ~~the~~ bottom of the bottle.

15. (Currently Amended) The air venting apparatus of claim 14, wherein the annular connection member comprises a first mixer for uniformly mixing milk powder with water.

16. (Currently Amended) The air venting apparatus of claim 15, wherein the first mixer is shaped like a circular plate tilted to a predetermined first angle and integrally formed lengthwise with the annular connection member.

17. (Canceled)
